

SAUNA

Self-Serve ♦ OPEN 24/7 ♦ Ready in 15 Minutes

Detailed Instructions

IMPORTANT:

The firebox is only 16" x 9" x 9"

SPECIAL FINE-SPLIT SAUNA WOOD BUNDLES available for \$10/bundle

(Good for 2 shorter saunas or 1 long sauna)

If providing your own wood:

Bring your very smallest pieces of firewood and twigs/kindling

Step 1 **Scoop Ashes into Ash Bin**

Step 2 **Fill Buckets with Water** and rinse down the entire inside benches, ceiling, walls, & floor.
Use the expanding hose provided and connect to any available water spigot temporarily.
Please disconnect and return hose.

Step 3 **Open the Chimney Flue**

Flue handle located on right side of chimney inside the sauna.
Position the handle to point vertically up-and-down.

Step 4 **Build the Fire**

The firebox is only 16" x 9" x 9", so filled with lots of very small dry wood is best.
Special sauna-wood bundles that are fine-split and dried are available for \$10/bundle.
Once a good fire is going, the sauna will heat up within about 10-15 minutes.
Put the firebox door handle on the 2nd notch to give the fire oxygen.
You can adjust the chimney flue inside to the 1-2 o'clock position to dump more heat into the sauna as desired.
If the chimney inside becomes visibly red-hot, close the firebox door temporarily.

ENJOY!

Use the ladle to throw water on sauna rocks for steam.

Enjoy for up to 15 minutes at a time.

Cycle in and out of the sauna to warm up and cool down.

Please respect fellow guests during quiet hours Midnight - 10 am with lowered voices.

Last One? When the last sauna of the night is done >> Close the firebox door completely and close the chimney flue (handle horizontal left-right position)

This allows burning wood to be safely extinguished.
